Factors Affecting Loyalty Intention and Digital Consumer Behaviour: Examining the Moderating Role of Brand Attachment

This study examines how Digital CRM, E-Service Quality, Online Interaction, and Online Trendiness influence Loyalty Intention and Digital Consumer Behaviour, with Brand Attachment acting as a direct predictor and moderator.

AUTHORS

Nadir Aliane

Associate Professor, Department of Management, College of Business Administration, King Faisal University, Saudi Arabia

Waleed Abdulrahman Alawad

Assistant Professor, Department of Business Administration, College of Business and Economics, Qassim University, Saudi Arabia

01. Introduction

Digital commerce has transformed how customers engage with brands. In online environments, firms no longer compete only through product and price, but also through service quality, digital relationship management, trend relevance, and meaningful interaction. Understanding which digital factors build customer loyalty is therefore critical for predicting digital consumer behaviour. This study investigates how Digital CRM, E-Service Quality, Online Interaction, and Online Trendiness affect Loyalty Intention, and how Brand Attachment strengthens behavioural outcomes.

02. Objective

This study was conducted to:

- examine the effect of Digital CRM on Loyalty Intention
- assess the influence of E-Service Quality on Loyalty Intention
- evaluate the role of Online Interaction in shaping Loyalty Intention
- test the effect of Online Trendiness on Loyalty Intention
- determine the influence of Loyalty Intention on Digital Consumer Behaviour
- assess the direct and moderating role of Brand Attachment

Related literature

Ebrahim (2020)

Social media marketing supports loyalty formation.

E-service quality positively shapes loyalty intention.

Ghorbanzadeh & Rahehagh (2021)

Brand attachment strengthens behavioural outcomes.

03. Methodology

The study adopted a quantitative, cross-sectional survey design. Data were collected from online shopping customers in Saudi Arabia using convenience sampling.

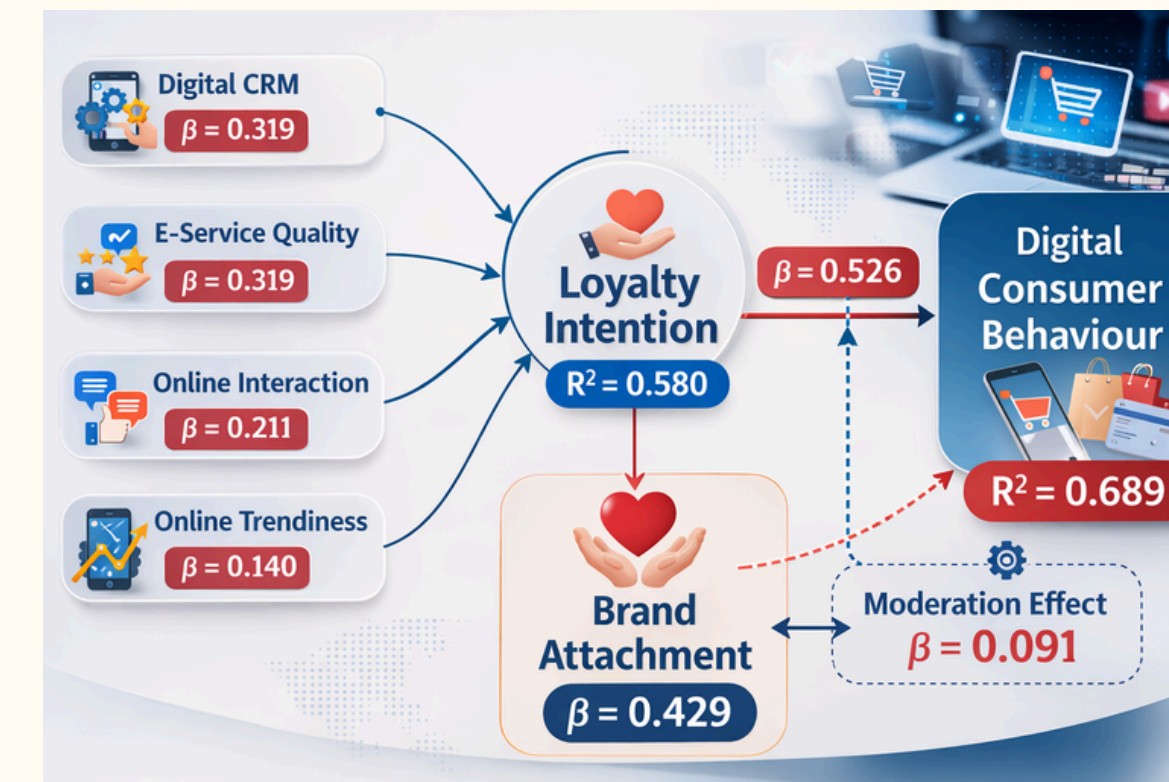

- **Questionnaires distributed:** 350
- **Usable responses:** 208
- **Response rate:** 59.42%
- **Scale:** 7-point Likert scale
- **Analysis tools:** SPSS and SmartPLS 4

04. Results/Findings

- The study found that all four digital drivers significantly influence Loyalty Intention.
- Loyalty Intention, in turn, strongly affects Digital Consumer Behaviour.
- Brand Attachment also has a direct positive effect on Digital Consumer Behaviour and, significantly moderates the relationship between Loyalty Intention and behaviour.

Direct effects:

- Digital CRM → Loyalty Intention
- E-Service Quality → Loyalty Intention
- Online Interaction → Loyalty Intention
- Online Trendiness → Loyalty Intention
- Loyalty Intention → Digital Consumer Behaviour
- Brand Attachment → Digital Consumer Behaviour

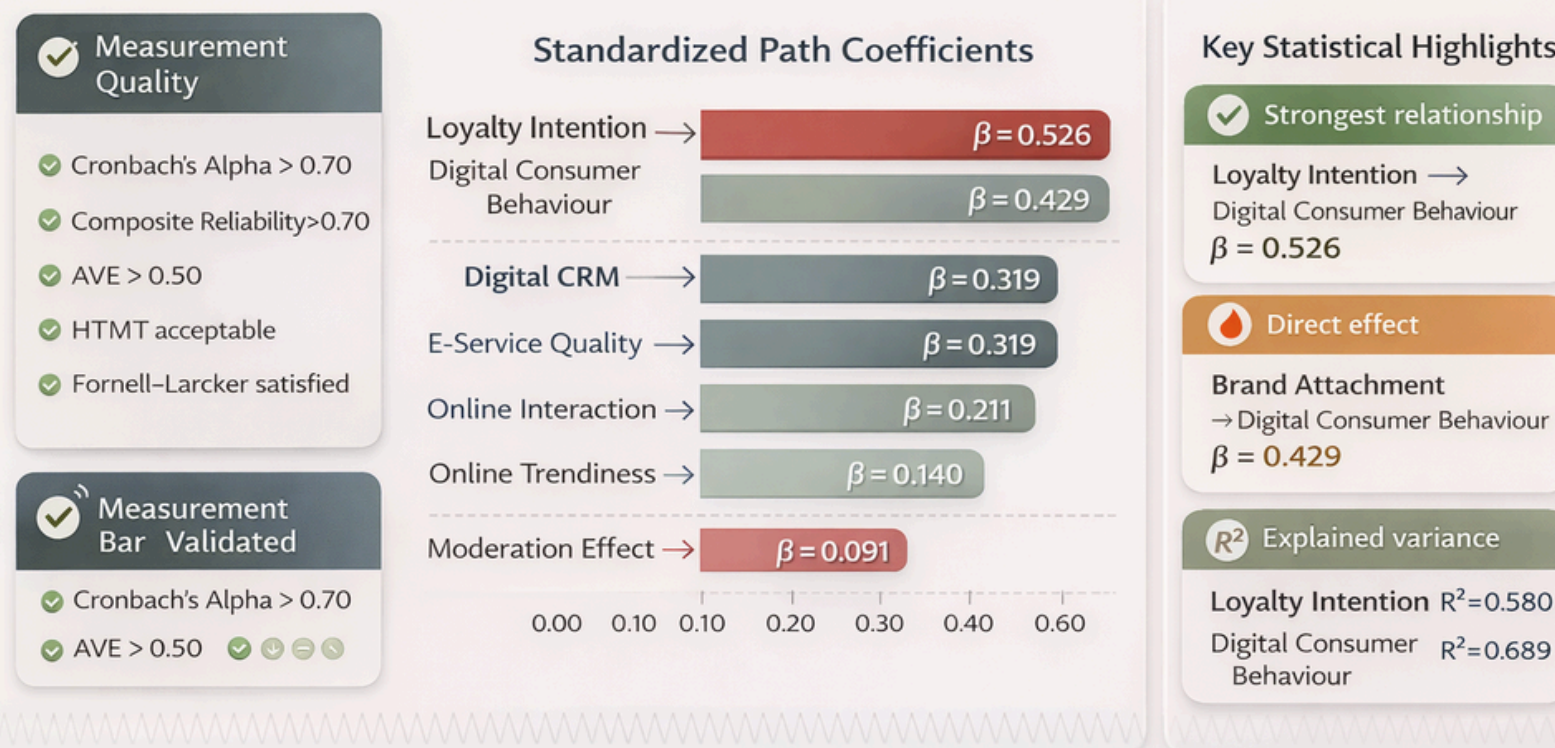

Moderation effect:

- Brand Attachment strengthens the Loyalty Intention → Digital Consumer Behaviour link

05. Analysis

SmartPLS-SEM was used to evaluate measurement quality, test hypotheses, and determine the explanatory power of the research model.

06. Conclusion

The study confirms that digital consumer behaviour is shaped by both functional and emotional drivers. Digital CRM, E-Service Quality, Online Interaction, and Online Trendiness all enhance Loyalty Intention, while Loyalty Intention strongly predicts Digital Consumer Behaviour. Brand Attachment not only directly influences consumer behaviour but also strengthens the conversion of loyalty intention into actual digital action. The findings suggest that successful digital marketing depends on both technological efficiency and emotional connection with the brand.

THANK YOU

CONFERENCE POSTER SUPPORT TOOLKIT SAMPLE

Present your research in a clear, visually strong, and conference-ready poster format.

We help researchers improve
poster structure • visual hierarchy • content clarity •
figure placement • data presentation • research
communication • presentation impact
