FORMATTING HELP SAMPLE

Journal-Ready Manuscript Formatting Demonstration

Prepared as sample | ResearchEdit4U Solutions Private Limited

This branded sample shows how an unformatted research manuscript is converted into a submission-ready document that aligns with a target journal style guide or manuscript template. The document is structured as a demonstrative service sample that can be shared with prospective clients.

Service focus shown in this sample

Draft manuscript review against target journal instructions

Style-aligned correction of title page, headings, spacing, captions, tables, and references

Table and figure consistency checks across the manuscript

Client-facing explanation of each correction so the value of the service is immediately visible

Company: ResearchEdit4U Solutions Private Limited

Website: www.researchedit4u.in

1. Sample Purpose and Positioning

This sample is designed for prospects who want to understand what Formatting Help looks like in practice. Instead of showing only a finished manuscript page, this document demonstrates the full correction logic: what the client submitted, what the journal expects, what was changed, and why those changes matter for submission readiness.

The model use case is a research article draft prepared for submission to a peer-reviewed journal. The same workflow can be adapted for biomedical, engineering, life science, social science, and multidisciplinary journals where manuscript templates and style guides differ.

2. What the Client Usually Submits

- A draft manuscript prepared by one or more authors, usually with inconsistent font sizes, spacing, and heading styles.
- A target journal style guide, Instructions for Authors page, or manuscript template.
- Tables, figures, and supplementary elements prepared separately or inserted inconsistently in the draft.
- A reference list that may be partially formatted or mixed across styles.

3. Typical Issues Found in a Raw Draft

- Title page details are incomplete or not arranged according to journal expectations.
- The manuscript uses mixed fonts, random bolding, inconsistent spacing, and uneven margins.
- Headings do not follow a uniform hierarchy, which makes the paper harder for editors and reviewers to navigate.
- Table titles, footnotes, and abbreviations are inconsistent across tables.
- Figure captions vary in position, size, punctuation, and structure.
- Reference entries are inconsistent in punctuation, italics, journal abbreviations, and DOI format.

4. Before-and-After Sample: Title and Abstract Excerpt

Before formatting	After RE4U formatting

Abstract

This study was done to see impact of zinc oxide nanoparticles on rice growth. There were 4 treatments. Results were significant and showed increase in biomass and chlorophyll. Keywords rice, nanoparticles, stress.

Abstract

The present study evaluated the effect of zinc oxide nanoparticles on rice growth under controlled water stress conditions. Four treatment groups were compared using standard physiological and biochemical indicators. The formatted version applies sentence case, author affiliation structure, and a journal-ready abstract layout with consistent keyword presentation.

Keywords: rice; zinc oxide nanoparticles; water stress; biomass; chlorophyll

5. Before-and-After Sample: Heading Structure and Body Formatting

Before formatting	After RE4U formatting
INTRODUCTION The topic is important because drought stress reduces productivity. many approaches have been explored. material and methods Plants were grown in trays. measurements was done after 30 days. data analysed using spss. Results & Discussion Treatment T3 showed best increase and p value was less than 0.05.	1. Introduction The topic is important because drought stress substantially reduces productivity and physiological resilience in rice. The formatted version applies one consistent body font, paragraph spacing, and heading hierarchy. 2. Materials and Methods Plants were grown in trays under controlled conditions. Measurements were recorded after 30 days, and the dataset was analysed using SPSS. 3. Results

Treatment T3 showed the largest increase in biomass and chlorophyll content, with statistically significant differences at $p < 0.05$.

4. Discussion

The corrected layout separates findings from interpretation so the paper reads more clearly and follows journal convention.

Journal Requirement Mapping Sheet

This section demonstrates how Formatting Help is executed as a structured compliance service rather than a cosmetic clean-up exercise. Each formatting change is mapped to a specific journal expectation and a measurable correction.

Journal requirement	Issue found in draft	RE4U correction made
Structured title page with affiliations and corresponding author details	Author names were placed in plain text without department, institution, or email formatting	Created a journal-style title block with consistent author superscripts, affiliations, and corresponding author note
Double-spaced main text with continuous line numbering	Body text was in mixed 1.0 and 1.15 spacing and had no line numbering cue	Applied uniform manuscript spacing and prepared a layout compatible with line numbering insertion
Headings should follow a clear IMRaD hierarchy	Results and Discussion were merged inconsistently, and subheadings were not styled consistently	Standardised heading levels and aligned them to Introduction, Methods, Results, Discussion, and Conclusion
Tables should use uniform titles, notes, and abbreviation handling	Tables used mixed title placement, inconsistent decimal alignment, and undefined abbreviations	Converted all tables to one journal-consistent style with standard titles, notes, and aligned values
Figure captions should be complete and placed consistently	Some captions were above figures and others were below; font sizes varied	Applied one caption style, placed captions consistently, and standardised size and numbering
Reference list should match target style exactly	References mixed APA-like punctuation, abbreviated journals, and missing DOI presentation	Reformatted the reference list into one consistent target-journal style

6. Table and Figure Consistency Demonstration

Formatting Help is especially valuable when a manuscript contains several visual elements prepared by different co-authors. Editors often notice inconsistent titles, fonts, notes, decimal alignment, and caption structure immediately. This sample shows the type of standardisation performed in the service.

Before	After																
Table 2 growth parameters at 30 days after sowing root length(cm) shoot length cm biomass(g) control 8.2 14.5 1.2 T1 8.8 15.3 1.4 T2 9.4 16.1 1.5 no. of replicates 3	Table 2. Growth parameters at 30 days after sowing <table><tr><th>Treatme nt</th><th>Root length (cm)</th><th>Shoot length (cm)</th><th>Biomass (g)</th></tr><tr><td>Control</td><td>8.2</td><td>14.5</td><td>1.2</td></tr><tr><td>T1</td><td>8.8</td><td>15.3</td><td>1.4</td></tr><tr><td>T2</td><td>9.4</td><td>16.1</td><td>1.5</td></tr></table> Values are means of three replicates.	Treatme nt	Root length (cm)	Shoot length (cm)	Biomass (g)	Control	8.2	14.5	1.2	T1	8.8	15.3	1.4	T2	9.4	16.1	1.5

Control	8.2	14.5	1.2														
T1	8.8	15.3	1.4														
T2	9.4	16.1	1.5														
Figure 3 Chlorophyll changes under stress font on figure differs from other figures caption placed above image in this section only	Figure 3. Chlorophyll changes under water stress across treatment groups. Caption placed consistently below the figure, using one font size, one numbering style, and one punctuation pattern across the manuscript.																

7. Reference Formatting Demonstration

Reference style alignment is one of the most requested parts of manuscript formatting because even technically strong papers can appear careless when the bibliography mixes punctuation, journal abbreviations, initials, volume formatting, and DOI presentation.

Before formatting	After formatting
Kumar A, Das P and Mehta S 2023 Effect of nanoparticles on rice. Plant Science Journal 12 23-31	Kumar, A., Das, P., & Mehta, S. (2023). Effect of nanoparticles on rice. Plant Science Journal, 12, 23-31.
Roy et al. 2022. drought tolerance in cereals, journal of agronomy, 15(4),pp.88-97 doi missing	Roy, T., Sen, R., & Iyer, K. (2022). Drought tolerance in cereals. Journal of Agronomy, 15(4), 88-97. https://doi.org/xx.xxxx/xxxxxx

8. Detailed Explanation of the Service Workflow

Step 1: *Journal requirement review.* The draft, target journal template, and Instructions for Authors are reviewed together. This prevents generic formatting and ensures the output is tailored to the destination journal.

Step 2: *Structural correction.* The title page, abstract block, heading ladder, section order, paragraph spacing, and numbering pattern are standardised. This creates a professional manuscript architecture before fine corrections are made.

Step 3: *Table and figure normalisation.* Every table title, footnote, abbreviation, caption, and in-text callout is checked for consistency. This stage often prevents common desk-level presentation issues that make a manuscript look unfinished.

Step 4: *Reference style alignment.* In-text citations and bibliography entries are brought into one consistent journal style. Missing metadata, such as DOI information or incomplete page ranges, is flagged when the author needs to supply it.

Step 5: *Final quality review.* A last pass confirms manuscript-wide consistency in fonts, spacing, margins, punctuation style, numbering, and element order. A tracked version can also be prepared so the client sees exactly what changed.

What You Receive

Deliverable	Purpose
Formatted manuscript (.docx)	Submission-ready file aligned to the target journal style guide or template
Tracked-changes version	Shows exactly what was corrected so the author can review formatting decisions transparently
Table and figure consistency check	Ensures numbering, captions, notes, abbreviations, and citation callouts are uniform across the paper
Reference style correction	Brings the bibliography and in-text citations into one consistent target style
Formatting summary sheet	Explains key corrections and flags any items still requiring author input, such as missing figure resolution or incomplete author metadata

THANK YOU

FORMATTING SUPPORT TOOLKIT SAMPLE

Present your document in a clean, consistent, and submission-ready format.

We help researchers improve
document structure • heading hierarchy • table and
figure formatting • citation style consistency •
journal/thesis formatting • layout clarity

Want this applied to your document?

Share your manuscript, thesis chapter, journal
guidelines, or draft file and get a
Free sample formatting review.
