Language Polishing Sample

Before-and-After Academic Editing Demonstration

Prepared for service demonstration

ResearchEdit4U Solutions Private Limited

www.researchedit4u.in

Note: This sample uses an anonymized manuscript-style excerpt reconstructed from common problems seen in poorly developed research papers. It is designed to demonstrate how Language Polishing improves clarity, flow, grammar, and consistency without altering the intended meaning.

1. Service Snapshot

What the client gives: A rough manuscript draft and a preferred English style (US or UK).

What the client gets: Tone polish, grammar consistency, smoother academic phrasing, and a cleaner publication-ready version.

Editing preference used in this sample: UK English.

Sample Scenario

Document type	Research manuscript excerpt
Section edited	Introduction and result-interpretation passage
Primary issues identified	Weak grammar, unclear flow, repetition, article/preposition errors, inconsistent tense, and non-academic tone
Goal of polishing	Create a clear, journal-appropriate version while preserving the author's intended meaning

2. Original Draft as Received

The following passage reflects the quality of a poorly developed academic draft.

Original Excerpt

The present study is about the using of social media and its effect in academic performance of university students in a private institution. In current era social media is very important and almost every student are using it in everyday life for various purposes and therefore it become necessary to understand how it influence the study habits and academic results. Many researchers has said both positive and negative things but still there is lack of clear finding in our local context.

For this study, 120 students was selected from different departments and questionnaire were distributed physically as well as online mode. The data were analysed by descriptive statistics, correlation and simple regression for finding whether social media usage significantly affect CGPA of students. The respondents was mostly undergraduate and their average age were 21.3 years. Most of the students reported that they using social media more than 4 hours per day.

The findings shows that social media usage have negative relationship with academic performance and the p value was significant. It can be said excessive use of social media distract students from study and make reduction in concentration level which ultimately impact the performance badly. However, some students also said that social media helps them in group discussion, resource sharing and getting educational contents, so it is not fully negative always.

Based on above result, the university should make awareness among students for proper use of social media and teachers should also guide them for productive use. Future researchers can take more sample and different variables because this study was limited only to one institution and due to time shortage.

3. Polished Version Delivered to Client

Revised Excerpt (UK English)

This study examines the relationship between social media use and academic performance among university students at a private institution. In the current academic environment, social media plays a major role in students' daily lives, making it important to understand how it shapes study habits and academic outcomes. Previous studies have reported both beneficial and adverse effects; however, evidence from the local context remains limited and inconsistent.

A total of 120 students from different departments participated in the study. Questionnaires were distributed in both physical and online formats. The data were analysed using descriptive statistics, correlation analysis, and simple linear regression to determine whether social media use significantly affected students' CGPA. Most respondents were undergraduates, and the mean age of the sample was 21.3 years. A large proportion of participants reported using social media for more than four hours per day.

The findings indicate a statistically significant negative relationship between social media use and academic performance. This suggests that excessive use of social media may distract students from study, reduce concentration, and adversely affect academic outcomes. At the same time, some students reported that social media supported group discussion, resource sharing, and access to educational content. Therefore, its impact should not be viewed as entirely negative.

Based on these findings, the university should promote awareness regarding the responsible and productive use of social media. Teachers may also play an important role by guiding students towards more academically useful digital practices. Future studies should include a larger sample and additional variables, as the present study was limited to a single institution and constrained by time.

4. Edit Rationale and What Improved

Key Editing Interventions

Issue Type	Example from Draft	Improved Version	Purpose of Change
Grammar and agreement	"students was selected"	"students participated"	Correct grammar and improve natural academic phrasing
Tense and consistency	"The findings shows"	"The findings indicate"	Ensure subject-verb agreement and formal tone
Clarity of purpose	"study is about the using of social media"	"study examines the relationship between social media use and academic performance"	State the research focus clearly and precisely
Academic tone	"make reduction in concentration level"	"reduce concentration"	Replace awkward phrasing with concise academic English
Logical flow	Disconnected ideas across sentences	Ordered background → methods → findings → implications	Improve coherence and readability
UK English consistency	Potential US/UK mixing	Analysed, programme style retained where needed	Maintain a single language standard throughout

5. Before-and-After Micro Examples

Original	Polished	Reason
"social media is very important and almost every student are using it"	"social media plays a major role in students' daily lives"	Reduced informality and fixed grammar
"it become necessary to understand how it influence"	"it is important to understand how it shapes"	Improved tense, agreement, and flow
"it is not fully negative always"	"its impact should not be viewed as entirely negative"	More precise and professional tone
"due to time shortage"	"constrained by time"	Sharper academic phrasing

6. US and UK Preference Note

Style Alignment Example

UK English used in this sample: analysed, behaviour, organisation.

US English version would use: analyzed, behavior, organization.

Service promise: Language is polished according to the client's preferred English convention without changing the scientific meaning.
