Paper Type: Original research article

Paper received for – Substantive Editing

Substantive Editing Covers: Advance and Contextual Suggestions in addition to key language checks

Subject – Marketing

Introduction

Over the past decade, internet strategies aimed at engaging customers have rapidly evolved. Consequently, Internet users have adapted their behavior in response to these evolving strategies. This shift in behavioral patterns has, in turn, Aliane and Alawad 2 led to a transformation in customer habits within the digital environment. A distinctive characteristic of the digital environment is its endeavor to continually attract an expanding user base (Reyes-Menendez et al., 2019). Within the digital environment, organizations must comprehend the conduct of online users as a foundational element for devising online business strategies. A comprehensive understanding of these behaviors facilitates seamless enhancement of customer experiences (Saura et al., 2020). Customer behavior is influenced by their intentions, particularly in online shopping. It is imperative for online retail enterprises to prioritize the examination of customer loyalty. Those engaged in online commerce can attain success by directing their attention towards customer satisfaction, thereby fostering subsequent impacts on loyalty intentions (Mofokeng, 2021). Customer turnover incurs substantial costs for organizations, underscoring the critical importance of cultivating loyalty. The expenses associated with acquiring new customers significantly surpass those incurred to retain existing customers. The ongoing evolution of global technology has precipitated concurrent shifts in customer behavior. This evolution has introduced heightened uncertainty among online sellers regarding the discernment of customer needs (Cepal, 2021). Hence, it is imperative for organizations to comprehend the influence of Internet technology on user loyalty intentions and ascertain how it can be strategically leveraged by entities to augment their overall profitability (Du & Mao, 2018). The primary emphasis of relationship marketing is the

cultivation and establishment of customer connections. Effectively managing organizational relationships and interactions is significantly facilitated by the implementation of CRM, which is recognized as one of the most robust strategies in this regard (Chatterjee et al., 2021). Through the implementation of these strategies, organizations convey a sense of significance and relevance to their customers. As technology has progressed, the evolution of CRM has given rise to the concept of E-CRM, which is a requisite in the contemporary digital era (Farmania, Elsyah, & Tuori, 2021). Conversely, social interaction has been streamlined by new media. The advent of social media has garnered a substantial global clientele for online platforms, presenting one of the most interactive mediums. Users can establish profiles across various social media platforms and engage in mutual interactions. Developing a marketing mix grounded in social media is paramount for the efficacy of a marketing strategy, thereby facilitating the acquisition of new customers (Abrar et al., 2017). Modern technology has spurred changes in marketing trends, prompting businesses to shift online in accordance with digital marketing trends. Trendiness significantly influences brand sales, leading strategists to leverage social media to shape consumer preferences. Swift customer responses on social media are attributed to current trends and timely interactions (Che Nawi et al., 2020). The attribute of trendiness pertains to the capability to acquire novel or pre-existing information concerning any brand (Ibrahim & Ganeshbabu, 2018). Over the past two decades, practitioners and scholars have increasingly embraced the concept of e-services. The literature describes e-services as services accessible through electronic applications and products, encompassing web-based platforms through which services are extended to customers (Saleemi, Anjum, & Rehman, 2017). E-services represent a paradigm wherein either the entirety or a portion of services is delivered through the Internet. The underpinning of e-services involves an information 3 International J. of Oper. and Quant. Management system at the backend and a web-based system at the front end, with an interface facilitating their integration. These services play a pivotal role in fostering relationships and instilling trust in students (Askari et al., 2016). The cultivation of brand attachment is of paramount significance in establishing a connection among customers and influencing their behavior. Consequently, the positive impact on organizational profitability and performance is evident. Brand attachment serves as an indicator of an individual's mindset, reflecting the commitment exhibited by customers (Ghorbanzadeh & Rahehagh, 2021; Shimul, 2022). Given the pivotal role of loyal customers in enhancing the profitability of online enterprises, this study scrutinizes the impact of factors conducive to augmenting loyalty intentions and digital consumer behavior among customers who engage in online shopping.
