Journal Selection Checklist

Checklist | A practical screening sheet to help scholars shortlist safer, better-fit journals before submission.

How to use this sample: Edit the highlighted placeholders, adapt the tone to your journal, and verify every factual statement before submission.

How to use this checklist

- Review 3–5 target journals side by side before formatting your paper.
- Mark yes/no against each criterion instead of relying on impact factor alone.
- Reject any journal that shows scope mismatch, indexing uncertainty, or predatory red flags.

Core screening checklist

Checkpoint	Mark	Why it matters
Aims and scope match the manuscript topic	☐ Yes ☐ No ☐ Unsure	A poor scope fit often leads to immediate desk rejection.
Article type accepted (original article/review/case report/etc.)	☐ Yes ☐ No ☐ Unsure	Check whether the journal accepts your exact manuscript type.
Indexed in trusted databases relevant to your field	☐ Yes ☐ No ☐ Unsure	Verify in official sources, not only on the journal website.
Publisher and editorial board appear credible	☐ Yes ☐ No ☐ Unsure	Look for real affiliations, policies, and publication history.
APC/cost is transparent and affordable	☐ Yes ☐ No ☐ Unsure	Confirm fees, waiver policy, and currency before submission.
Peer-review and ethics policies are clearly stated	☐ Yes ☐ No ☐ Unsure	Look for COPE, plagiarism, corrections, and conflict of interest statements.
Turnaround time is realistic, not suspiciously fast	☐ Yes ☐ No ☐ Unsure	Promises of ultra-fast acceptance can be a warning sign.
Recent published papers resemble your study area	☐ Yes ☐ No ☐ Unsure	Scan recent issues to judge fit and audience.

Red-flag warning signs

- Unclear indexing claims or misleading database logos.
- Poor website quality, fake editorial board members, or missing contact information.
- Unrealistic promises such as guaranteed acceptance or publication within a few days.
- Very broad subject coverage without a clear scholarly identity.

Decision note

Best-fit journal selected: [Insert journal name]

Reason for selection: [Summarise fit, indexing, audience, and expected review speed.]
